DME Order Lifecycle Automation

Version 1.0

1. Document Revision History

This section records the history of significant changes to this document. Only the most significant changes are described here. The document version number denotes the document information changes. The version number will be increased by 1.0 if significant changes are made. The version number will be increased by 0.1 if minor changes are made to improve its readability without affecting its meaning or intent.

Version	Section/Page	Description	Author	Date
1.0	New Document	Draft version for DME Order Lifecycle Automation workflow	Varalakshmi S	10/10/2025

2. Document Sign Off

The following table contains the people required to sign off and review this document and those who need the document for information only.

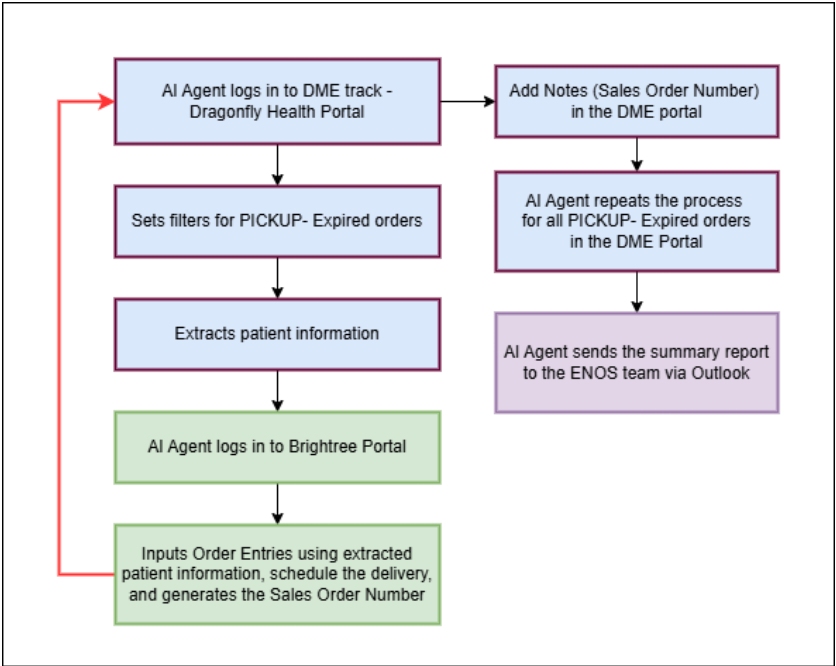

Name	Responsibility	Date

3. Requirement Summary

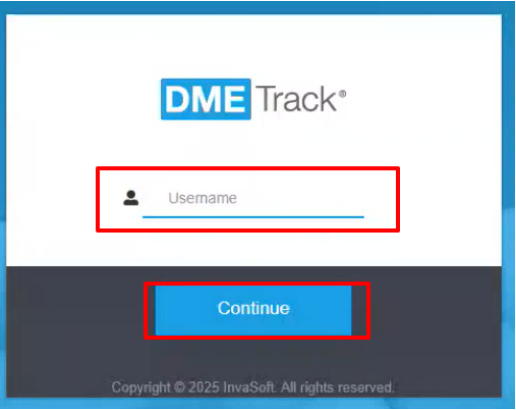

Stakeholders	Business Sponsor: Jon Enos Business SME: Tammi Vuolo IT Lead: Pradeep Kumar IT Developer: Monisha
Objective	This document explains how the AI Agent will streamline the process of logging in to the DME Track portal, setting filters, selecting PICKUP-EXPIRED orders, extracting patient information, and then logging in to the Brightree portal, updating order entries using the extracted patient information, and adding notes back in the DME Track Portal.

Overview and Current State	The ENOS team spends a lot of time manually logging in to the DME Track portal, setting filters, selecting PICKUP-EXPIRED orders, extracting patient information, and then logging in to the Brightree portal, updating order entries using the extracted patient information, and adding notes back in the DME Track Portal. This process is time-consuming and error-prone, resulting in inefficiencies. The AI Agent will streamline the above-mentioned process. This streamlined approach will save the ENOS team significant time, reduce errors, and improve overall efficiency.
Future State (RPA)	The AI Agent replaces the manual efforts and streamlines the end-to-end workflow within the DME Track & Brightree portals. The AI Agent will streamline the following tasks: • The AI Agent will log into the DME Track portal, set filters, select PICKUP-EXPIRED orders, and extract patient information. • The AI Agent will log in to the Brightree portal and update order entries using the extracted patient information. • The AI Agent will add order notes back in the DME Track Portal. • The AI Agent will repeat this process for all PICKUP-EXPIRED orders available on the DME Track Portal. • The AI Agent will send a summary report to the ENOS team via Outlook.
Systems Impacted	○ DME Track Portal ○ Brightree Portal ○ Outlook
Business Benefits	• Elimination of manual errors. • High accuracy of the process. • Swift execution and efficient handling of volumes. • Substantial reduction of operational costs and time by eliminating manual efforts.
Risk & Control	AI Agent credentials are stored in an encrypted secret vault within the tech platform. Access to these credentials is restricted.
Volumes & Frequency	Need to Confirm
Production Schedule	Need to Confirm

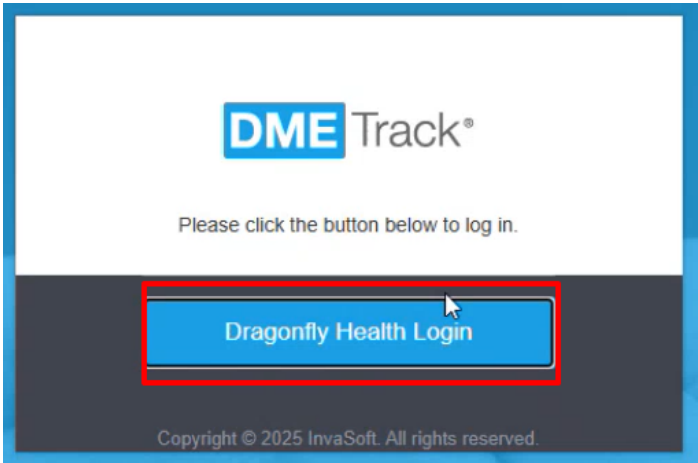

4. Process Map

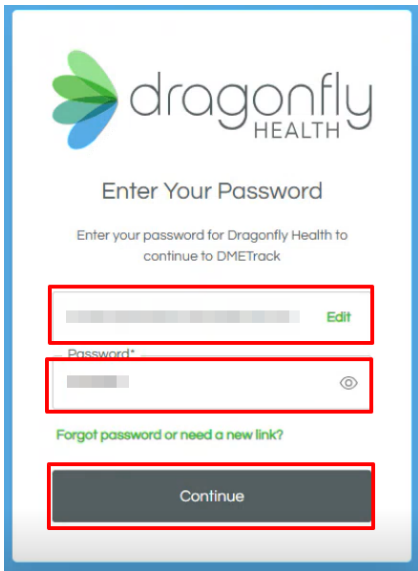

5. Process Steps:

#	Steps	AI Agent Flow
Functionality #1: Extracting Patient Information from DME Track Portal System/Application: DME Track Portal		
1	Log in to the DME Track Portal	- The AI Agent launches the DME Track Portal using the URL below. DME Track Portal URL: https://www2.dmetrack.com/?iss=https%3A%2F%2Fauth.dragonflyhealth.com%2F - The AI Agent enters the “Username”. - The AI Agent clicks the “Continue” button. 

- The AI Agent clicks on the “Dragonfly Health Login” button to enter the Dragonfly Portal.

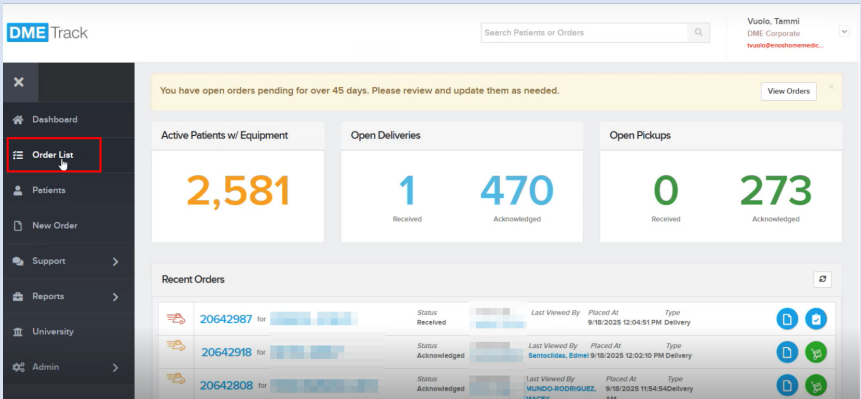

- The AI Agent enters the **Username** and **Password**.
- The AI Agent clicks **Continue**.

2 Set filters

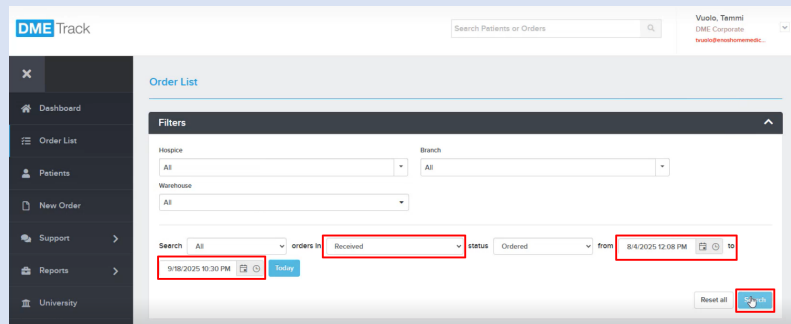

- The AI Agent navigates to the **Order List** tab on the left of the Homepage.

- The AI Agent sets filters in the **Order List** page.
- The AI Agent selects **Received** in the drop-down of **Orders In** field.
- The AI Agent selects **Ordered** in the drop-down of **Status** field.
- The AI Agent inputs **From- To** date & time for the orders.

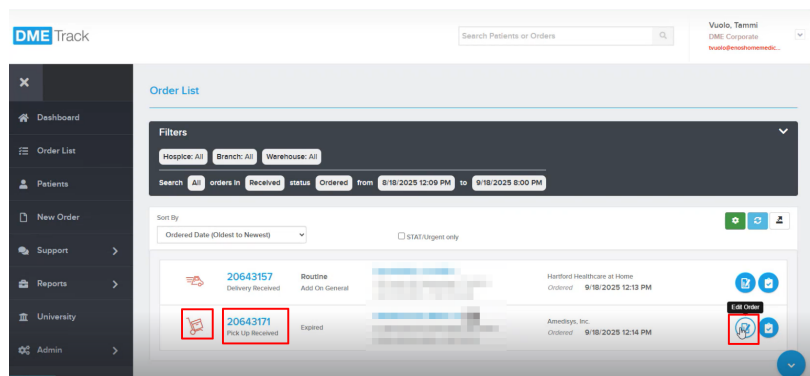

Note: The AI Agent sets the “**From Date**” to any date in the **first week of the previous month**, relative to the current date, and sets both the “From” and “To” time to any **PM hour**. (based on the client instruction)

- The AI Agent clicks on **Search** button.

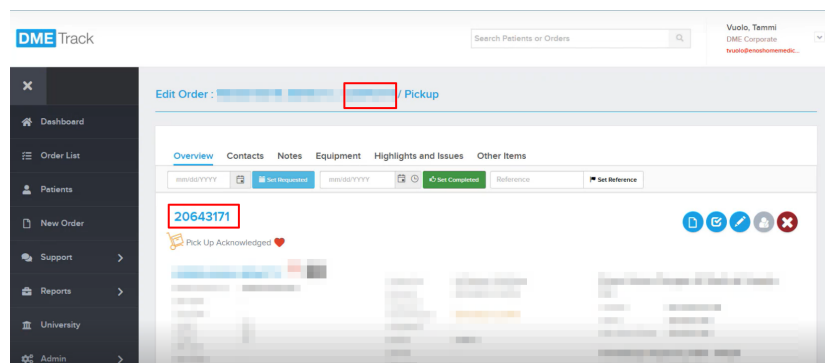

3 Selects the PICKUP-Expired orders and extracts the patient information

- The AI Agent clicks on the PICKUP-EXPIRED orders (with *Trolley* Icon).
- The AI Agent clicks on the Edit **Order** icon.

- The AI Agent extracts the SS ID/ Patient Name from the Edit Order page.

- The AI Agent extracts the Patient Expired Reason & special notes (If any) from the Edit Order page.

4	Log in to Brightree Portal	- The AI Agent launches the Brightree Portal using the URL below. Brightree Portal URL: https://brightree.net/F1/0168/Enos/Default.aspx - The AI Agent enters the “Username” and “Password”. - The AI Agent clicks the “Log In” button.
5	Input item orders	The AI Agent inputs the extracted the Patient Name in the Quick Lookup search bar.

- The AI Agent ensures that the patient's address in the DME Track portal matches the patient's address in the Brightree portal.

- The AI Agent clicks on **Edit** button.

Note: The **Green Deliverable** button indicates that the address is checked and verified by Brightree and is deliverable. Phone numbers are also available for sending to POD.

- The AI Agent navigates to **Orders**.

- The AI Agent navigates to **New Pickup/Exchange** under Orders page.

Order ID	HCPCS	Item	Name	Qty	Sched Dt	DOS
1617535	X9999	PDR-STATESERV	PDR-STATESERV	1	6/1/2024	6/1/2024
1618122	XZERO	LB	BED LOW BED	1	6/3/2024	6/3/2024
1646469	X9999	SLING LG	LG FULL BODY SLING	1	8/10/2024	8/10/2024
1653277	X9999	PERIMETER MATTRESS	PERIMETER MATTRESS	1	8/28/2024	8/28/2024

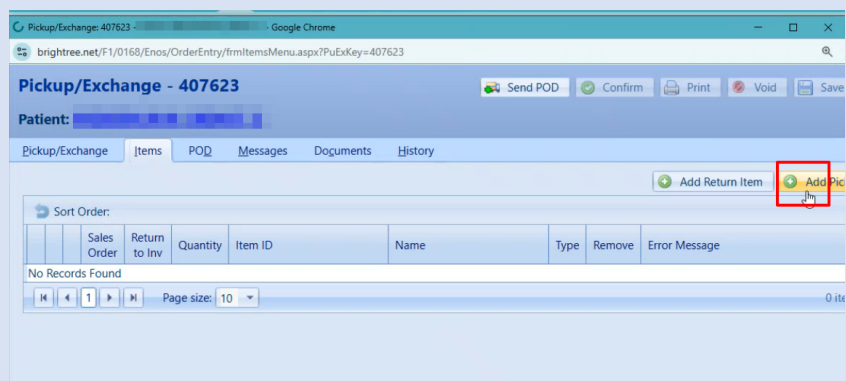

- The AI Agent navigates to **Pickup/Exchange** tab, and inputs the following:
 - Scheduled Date: Enters the next date
 - Final Billing Date: Pickup Date/DOD (If passed)
 - Pu/Ex Reason: Extracted from DME Track portal.

- Pu/Ex Note: CODE 1 SS Number (Any Special Note, if any) extracted from the DME Track Portal.

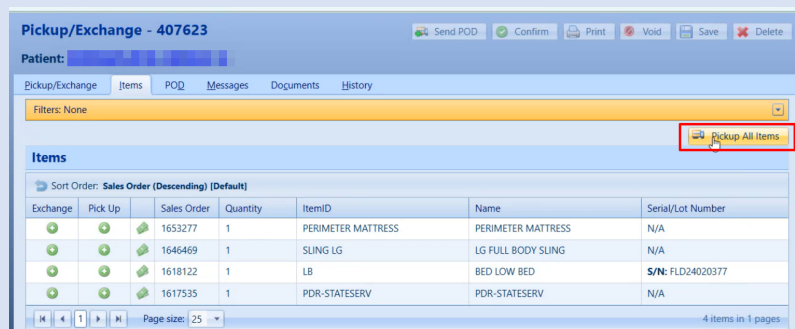

Note:

- CODE 1 refers to **Expired**. It is used for the drivers to be aware that the patient has passed away and to give their condolences.
- The AI Agent ensures that there is no special message (from the patient/family) under the **Notes** section in the DME Track Portal.
- If there is a special message from the patient's family (mentioned in the DME Track Portal), the AI Agent will extract and input it in the Pu/Ex Note. e.g.- CODE 1 SS Number - *****Message*****
- The AI Agent navigates to the next **Items** tab.

- The AI Agent goes to the **Add Pickup/Exchange** button.

- The AI Agent clicks on the **Pickup All Items** button.

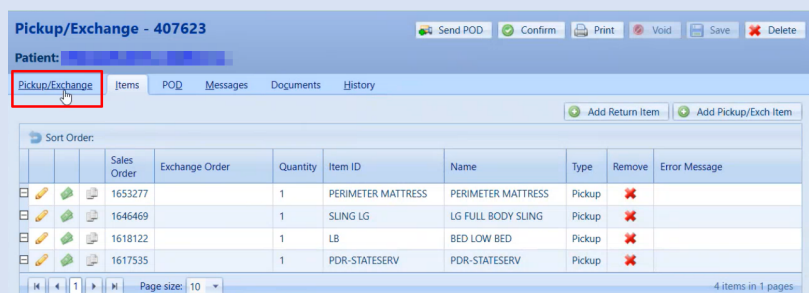

- The AI Agent navigates back to the **Pickup/Exchange** tab, ensures everything is entered correctly as in the DME Track Portal, and clicks **Send POD** button.

Exception Scenario:

The AI Agent throws an exception to the ENOS team if the orders are not confirmed and no orders remain for pick-up.

Pickup/Exchange - 407623

Patient: [Redacted]

Buttons: Set Requested, Set Completed, Reference, Set Reference

Notes

Date	User	Note
09/18/2025 12:14 PM	HCHB-Amedisys	This is an automated pick-up order by the DME Track interface.

Buttons: Add Public Note, Add Private Note

- The AI Agent inputs the copied/extracted **Pickup/Exchange Number** in Order Note (Edit Order) page of the DME Track Portal and clicks **Save**.

		
7	Repeat the Process	The AI Agent repeats Steps 2 to 6 for all the PICKUP-Expired orders in the DME Track Portal.
8	Close all Portals	The AI Agent closes the DME Track and Brightree portals.
Functionality #3: Sending the Summary Report to the ENOS Team System/Application: Outlook		
9	Sending the Report	The AI Agent sends the summary report to the ENOS Home Medical Team using the template below. Email Subject: ENOS – Pickup Expired - Summary Report - {MM-DD-YYYY} Email Body: ***This is an auto-generated e-mail. Please do not reply*** Hi Team, The process is complete. Please find the attached summary report for {Date}. Total Number of Pickup- Expired orders: {No. of orders} Successfully processed: {Total Number of Successful Directory Search} Failed: {Total Number of Failed Directory Search} Needs Attention: {Total Number of Records that Need Attention} Regards, AI Agent

6. Security:

- The AI Agent workflow runs on a Droidal-hosted VM.
- Customer data and application screens used within the AI Agent process do not cross the customer firewall back to Droidal.
- Droidal uses a least privilege security model for access to customer VPC and AI Agents.
